(54) WIRELESS INTERNET WORD PROCESSOR FOR INTEGRATION

(57) Abstract:

PURPOSE: A wireless Internet word processor for integration is provided to link up web documents typed by various word programs together on the network so that users are able to use the web documents in convenience on the network.

CONSTITUTION: When a user(21) searches documents with a mobile communication terminal(22), a web server(24) sends the documents which are proper to the user's terminal. The web server(24) serves the user with a method based upon protocols, with which the user can search or uses the web documents on the network after identifying the internet address that the user uses. In order to search the documents with a mobile communication terminal(22) on the Internet, the user is supposed to indicate the address(25) in which the documents are located. When doing it, the user is able to indicate the address(25) in convenience with a place converter (26).
